1. System Request

The system aims to manage bank activities efficiently by keeping track of multiple branches, account holders, and their associated accounts. The system is designed to have two types of users: employees and managers. Employees have the responsibility to handle account holders and their accounts, while managers oversee branches.

2. Feasibility Study

1. Operational Feasibility:

The system will improve the efficiency of managing account holders and branches. Employees and managers will find it user-friendly with intuitive functionalities.

The system will streamline processes such as adding/removing holders, updating information, and managing branches.

2. Technical Feasibility:

The system will be developed using two singly Linked Lists for account holders and branches.

The technology stack will be chosen based on compatibility with existing infrastructure and ease of maintenance.

Required hardware and software resources will be assessed and ensured to be within the available limits.

3. Economic Feasibility:

Development costs will be estimated, considering the required technology, development time, and personnel.

The benefits, such as improved efficiency and reduced errors, will be weighed against the costs to ensure a positive return on investment.

Long-term maintenance costs will also be taken into account.

4. Legal and Ethical Feasibility:

The system will comply with legal requirements related to banking data and user information.

Ethical considerations, such as data privacy and security, will be given utmost importance during system development.

User access and permissions will be designed to adhere to legal and ethical standards.

5. Schedule Feasibility:

A realistic timeline will be developed based on the complexity of the project and the resources available.

Milestones will be defined to track progress, and regular reviews will be conducted to ensure timely completion.

6. Cultural Feasibility:

The system will be designed to accommodate the cultural nuances of the users, ensuring a positive user experience.

Training and support will be provided to users to facilitate a smooth transition to the new system.

System Required Functions:

For Employees:

Add New Holder:

Employees can add new account holders by entering their basic information.

Remove Holder:

Employees have the ability to remove account holders from the system.

Display Holder Data:

Employees can view the information of account holders, providing transparency and ease of access.

Search Holder by Name:

An option for employees to search for account holders using their names.

Update Holder Information:

Employees can update the information of account holders as needed.

For Managers:

Add New Branch:

Managers can add new branches to the system by entering basic information such as ID, Name, and Manager.

Display Branch:

Managers have the ability to view information about branches.

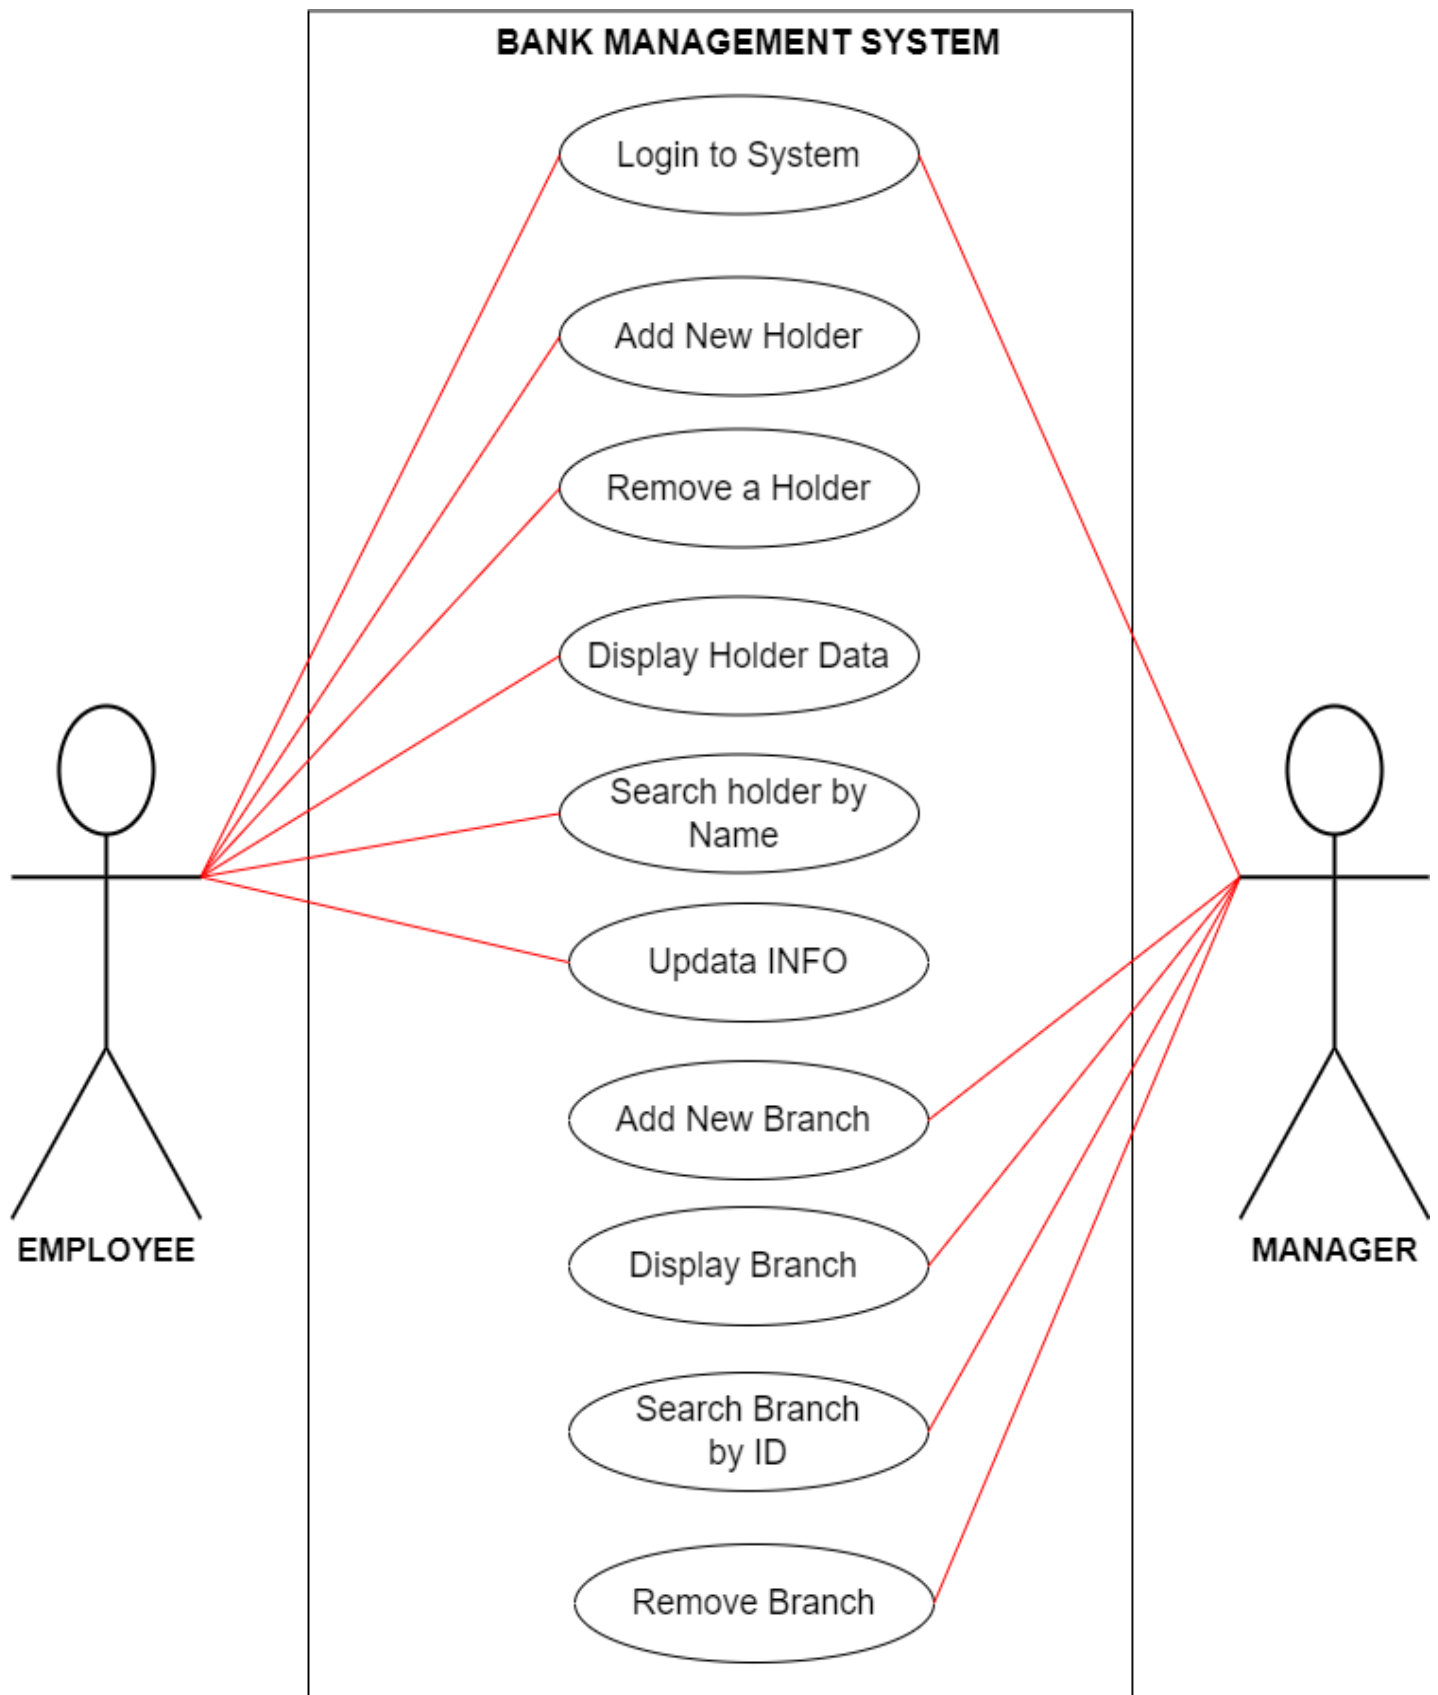

Search Branch by ID:

An option for managers to search for branches using their IDs.

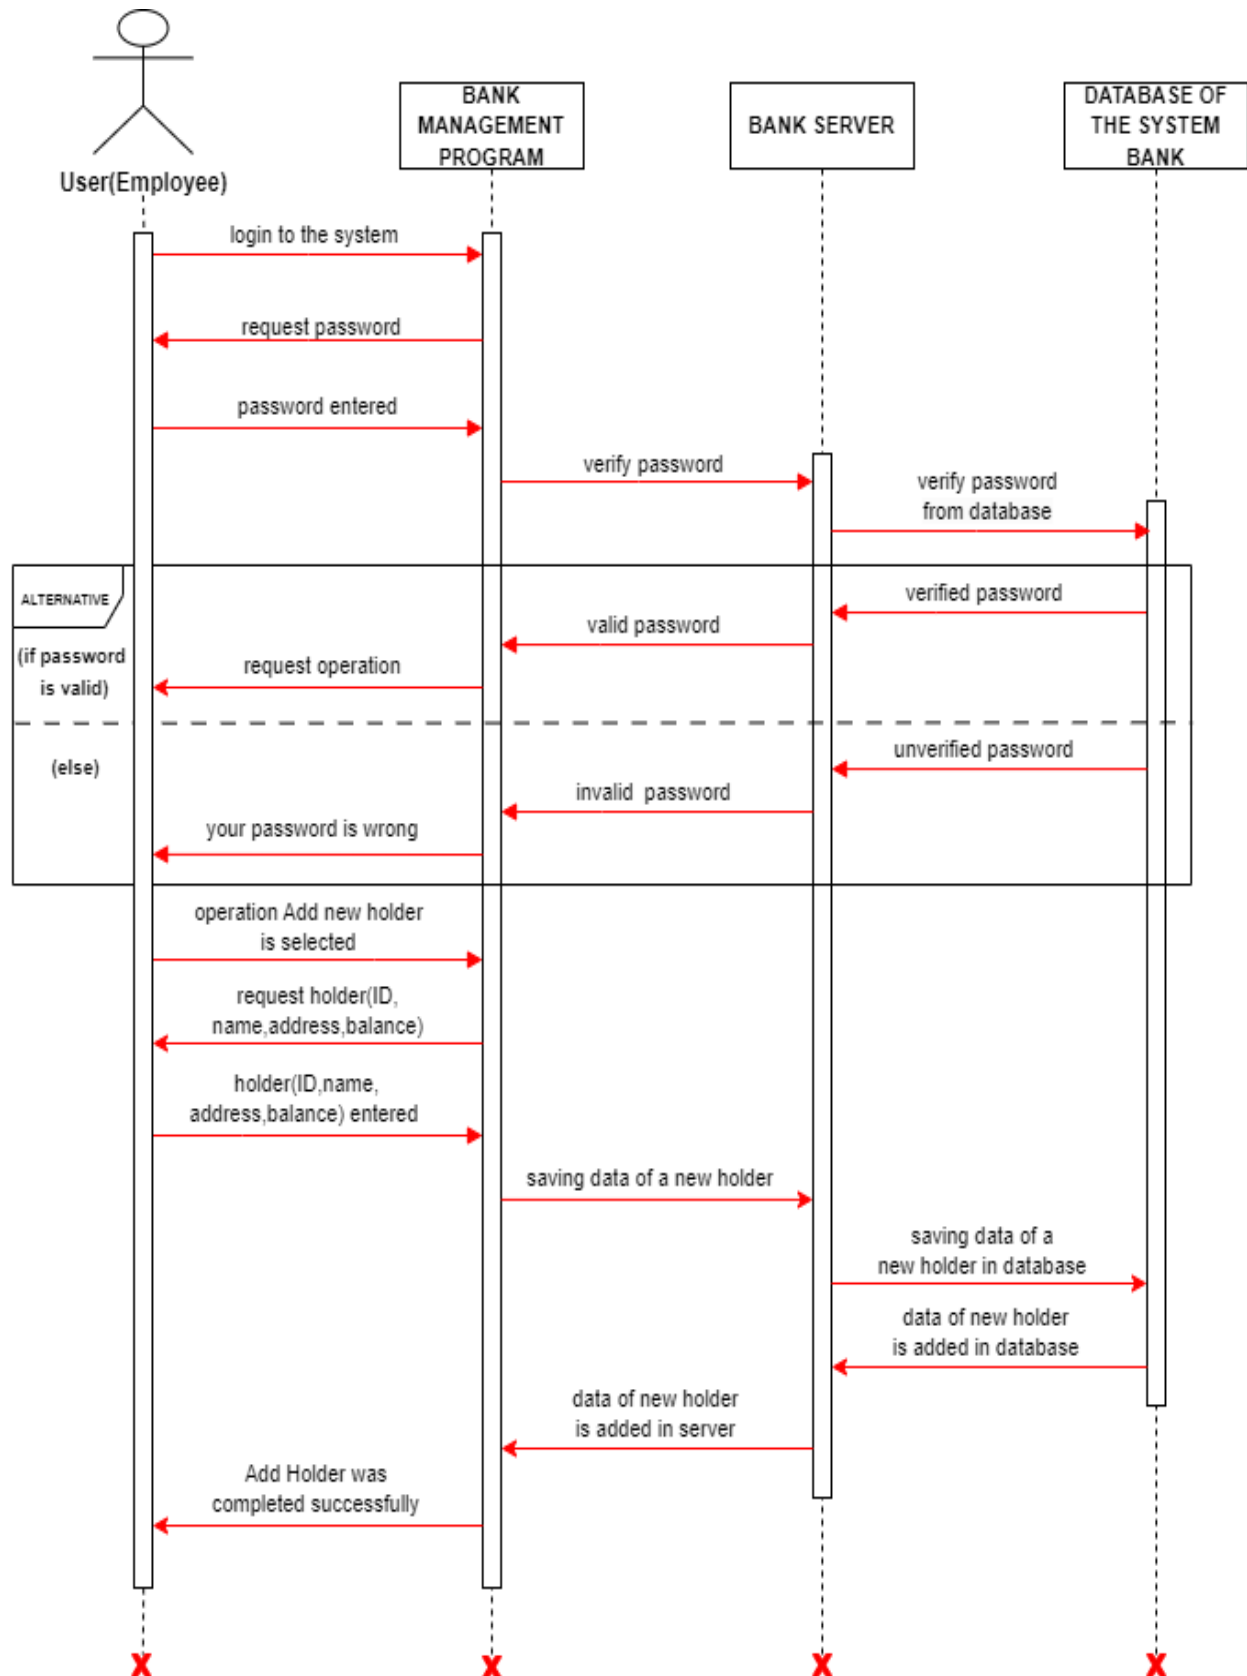

Remove Branch:

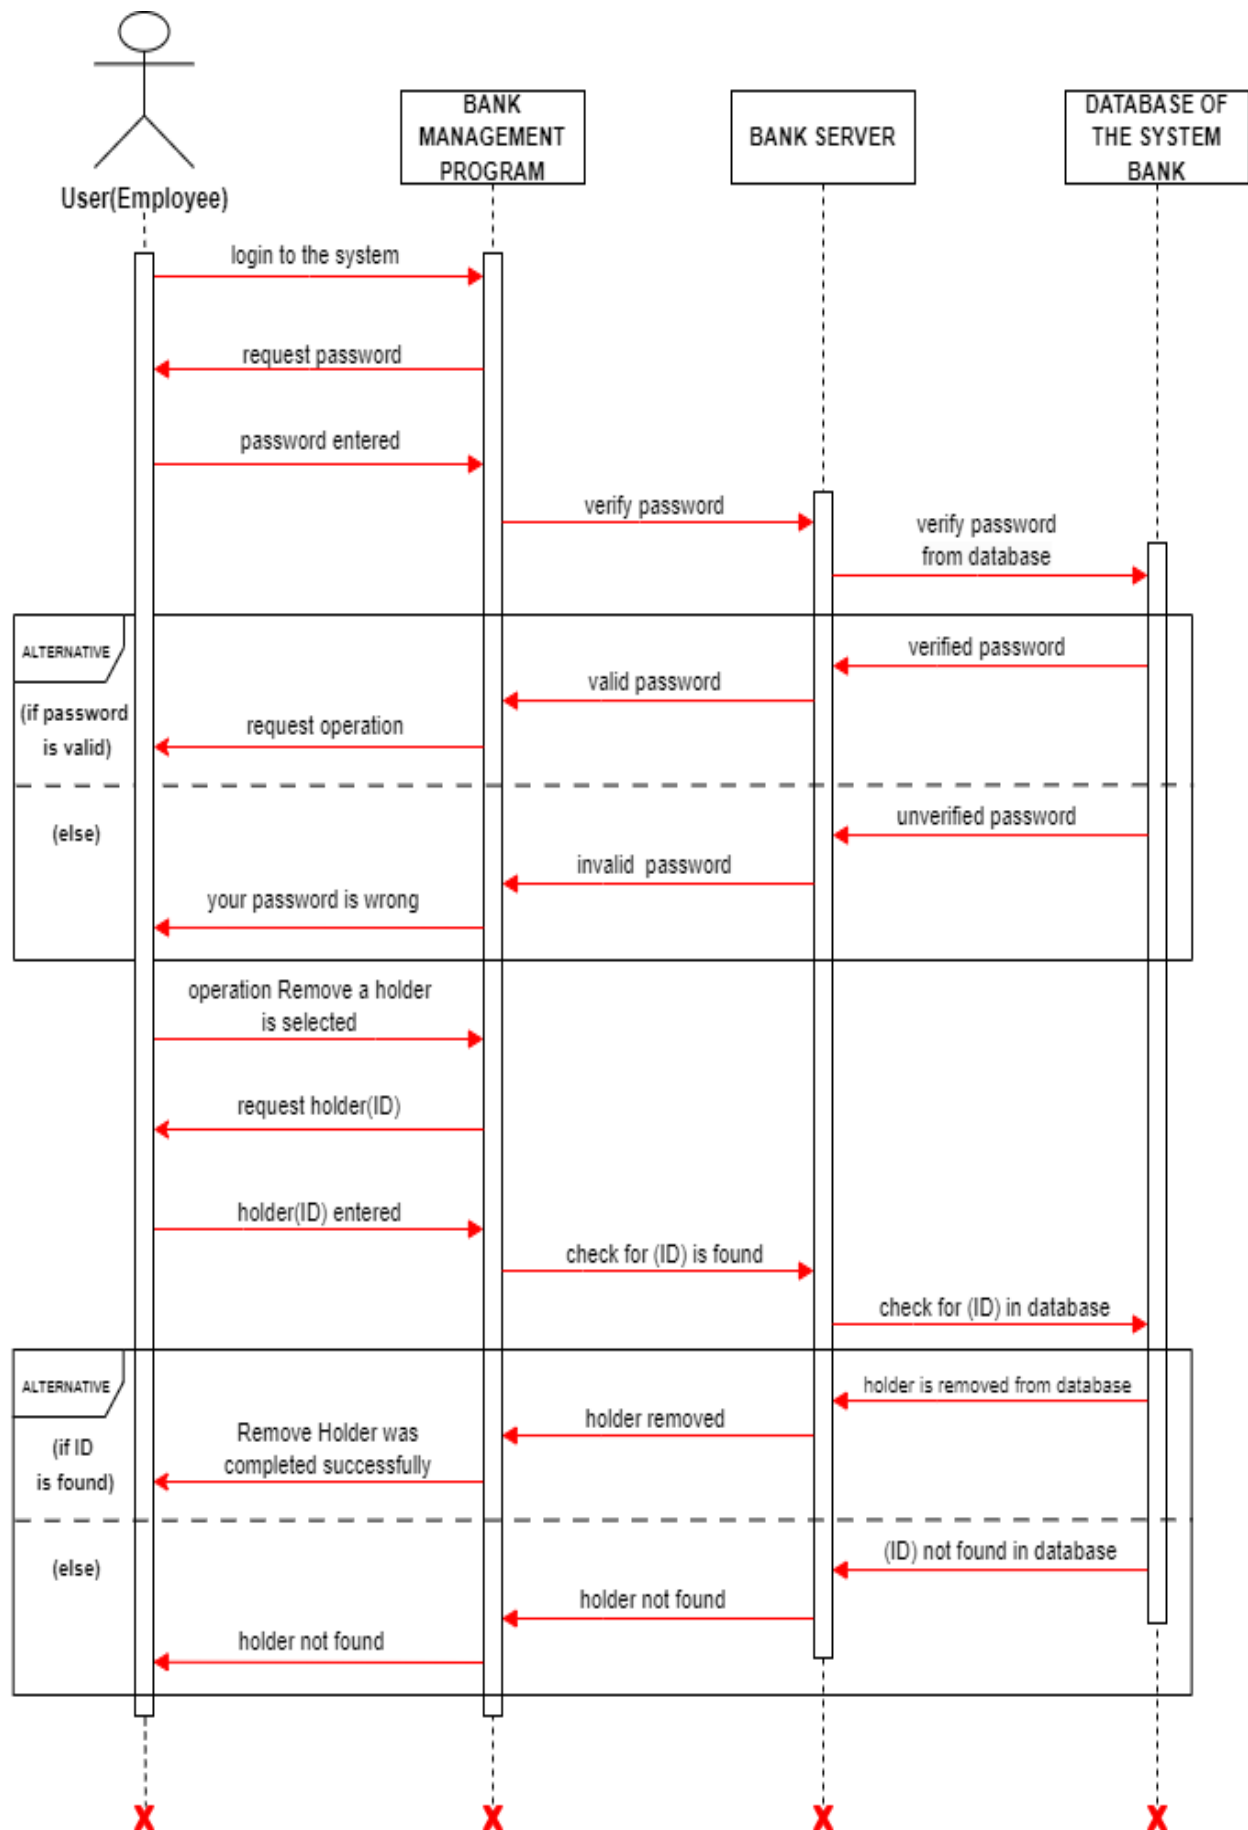

Managers can remove branches that are no longer operational or needed.
